Web sistemak

5. laborategi saioa - Hautazko ataza 2.

Aukera oso sinplea:

```xml
<?xml version="1.0"?>
<counts><count>0</count></counts>
```

Horren ostean, login.php eta logOut.php-tik atzituko dugu:

login.php:

```php
<--HTML etiketak hemen-->
<? php
... //Kautotze prozedurak

    $xml = simplexml_load_file('../xml/counter.xml');
    $count = $xml->count;
    $count= intval($count);
    $count++;
    $xml= "<counts><count>".$count."</count></counts>";
    $xml = new SimpleXMLElement($xml);
    $xml->asXML('../xml/counter.xml');

... // Prozedura gehiago
?>
```

logOut.php:

```php
<--HTML etiketak hemen-->
<? php
    $xml = simplexml_load_file('../xml/counter.xml');
    $count = $xml->count;
    $count= intval($count);
    $count= $count -1;
    $xml= "<counts><count>".$count."</count></counts>";
    $xml = new SimpleXMLElement($xml);
    $xml->asXML('../xml/counter.xml');
?>
```

Eta, azkenik, handlingQuizesAJAX.php artxiboan bistaratzeko (header-ean jarri dugu):

```php
<header class='main' id='h1'>
      You are currently logged in, <?php echo $_GET['mail'];?>.
      <span class='right'>
              <a href='.\logOut.php'>Log Out </a> | |
              <?php
                      $xml = simplexml_load_file('../xml/counter.xml');
                      $count = $xml->count;
                      echo "$count online";
              ?>
      </span>
      <h2>Handling Quizzes</h2>
</header>
```

Hau beste orriei ere aplika ahal zaio, baina entrega honetarako ez da egin.
